Compiled by:	**Sifiso Nyambi – Laboratory Manager**	
Approved by:	**Nonhlanhla Msibi - Operations Manager**	

Procedure: Identification and Review of Applicable Requirements

1. Purpose

To ensure that Azuresky (Pty) Ltd identifies, understands, and complies with:
a) the requirements of applicable standards,
b) customer requirements,
c) regulatory and statutory requirements, and
d) requirements of organisations providing recognition (e.g. SANAS), before accepting and performing laboratory activities.

2. Scope

This procedure applies to all laboratory activities, including testing, proficiency testing scheme activities, reference material production, and externally provided services.

3. Sources of Requirements

3.1 Standard Requirements

The laboratory operates a management system aligned with the following standards:
• ISO/IEC 17025:2017
• ISO/IEC 17034:2016
• ISO/IEC 17043:2023

Applicable test methods include, but are not limited to:

- ISO 1171 (Ash)
  ISO 562 (Volatile Matter)
  ISO 1928 (Calorific Value)
  ISO 13909-4 (Sample Preparation)
  SANS 5925 (MIAS)
  ISO 589(Total Moisture)
  ISO 1953(PSD)

The laboratory ensures current editions of all applicable standards are available and controlled.

3.2 Customer Requirements

Customer requirements may include:

- test methods to be used
- turnaround times
- reporting formats
- decision rules
- sample handling requirements
- confidentiality requirements

Customer requirements are confirmed through:

- quotations
- contracts or purchase orders
- sample submission forms
- written instructions or specifications

No work shall commence until customer requirements are reviewed and confirmed.

3.3 Regulatory and Statutory Requirements

Applicable regulatory requirements may include, but are not limited to:

- occupational health and safety legislation
- environmental legislation
- transport and handling of hazardous materials
- industry-specific fuel or mining regulations

The Managing Director is responsible for identifying and maintaining awareness of relevant regulatory obligations affecting laboratory operations.

3.4 Requirements of Organisations Providing Recognition

Where applicable, the laboratory considers the requirements of organisations providing recognition, including:

- SANAS accreditation criteria
- SANAS rules for claims of conformity and use of symbols

• SANAS R-series and TR documents
• sector-specific technical requirements

These requirements are used as guidance for system development and shall not be represented as accreditation until formal recognition is granted.

4. Review of Requirements

Before accepting work, the laboratory shall verify that:
• the requested method is available and suitable
• personnel are competent
• equipment and facilities are adequate
• applicable standards are available
• regulatory constraints are understood
• customer reporting requirements are clear

Any differences between customer requirements and standard methods shall be resolved and agreed in writing prior to testing.

5. Communication of Requirements

Relevant requirements shall be communicated to:
• technical staff (methods and controls)
• quality personnel (system requirements)
• customers (scope and limitations)
• external providers (where applicable)

6. Control of Changes

When changes occur to:
• standards
• customer requirements
• regulatory requirements
• recognition body requirements

the Operations Manager shall assess the impact and implement necessary updates to procedures, methods, or records.

7. Records

The following records shall be maintained:

- contract review or job acceptance records
- controlled standards register
- customer communications
- regulatory requirement register (where applicable)
- external provider evaluations

8. Responsibility

The Laboratory Manager is responsible for:

- ensuring this procedure is implemented
- ensuring relevant requirements are identified
- preventing acceptance of work outside laboratory capability
- ensuring no false claims of accreditation or recognition are made

9. Compliance Statement

Azuresky (Pty) Ltd ensures that laboratory activities are planned and performed in accordance with:

- applicable international and national standards
- agreed customer requirements
- relevant regulatory obligations
- applicable requirements of organisations providing recognition

This ensures technical validity, legal compliance, and transparency of laboratory operations.
