AzurESky "ensure quality of test"	**SURVEILLANCE OF THE PROCESSES PLAN**	
	Document no: ASMF 7.5.3	
	Compiled by: **Sifiso Nyambi - Laboratory Manager**	
	Approved by: **Nonhlanhla Msibi - Operations Manager**	

Introduction

Reference: ISO/IEC 17043:2023 Clause 7.5.3

This is ensure validity of the PT scheme to benefit in terms of information on the comparability of test or measurement methods, benchmarking against other PT scheme or RM producers, etc

Personnel involved

The personnel involved include the Laboratory Supervisor, Laboratory Manager, and Operations Manager. Each plays a defined role in planning, sample preparation (in terms of questionnaire), quality control, and reporting.

Role	Name	Job descrtiption
Lead Assessor		Laboratory Supervisor or Laboratory Manager or Operations Manager May each perform the role interchangeably.
Technical Assessor		Laboratory Supervisor or Laboratory Manager or Operations Manager May each perform the role interchangeably.
Observer (optional)		Trainee or support

External providers

All activities for the production, packaging, verification, and PT/CRM production are conducted internally. No outsourced or subcontracted work is used. This part will be excluded from surveillance of processes.

Approved by:	Nonhlanhla Msibi - Operations Manager	

Participation criteria

Participation is open to laboratories that are competent and/or accredited in accordance with ISO/IEC 17025, calibration laboratories and inspection bodies that apply internationally recognized coal analysis standards as outlined in the PT instruction form.

Number and type of expected participants

Participation is at least expected from 10 participants or more. A bigger sample of participants will provide a wide and valuable feedback as opposed to a smaller sample.

Description of activities and results to be reported

Microsoft link forms shall be developed with a set of questions, at least up to five (5) maximum. Surveillance process is a continuous requirement to be planned and reviewed. Therefore necessary questions may be included in the next round of surveillance plan, if five number of questions have been exceeded. A shorter number of questions shall be envisaged to enable a participant to spent less time answering questions.

Questions that seek surveillance of the following topic and more if need be, shall be formulated: This assessment shall be performed in six months of the year, collecting data from different participants.

- use of Azuresky reference materials;
- the transmission of results from participants;
- control of statistical conditions to confirm the validity of performance evaluation;
- checking of reports;
- comparisons against previous PT rounds.
