AzurESky "ensure quality of test"	**RISK ASSESSMENT TO IMPARTIALLY**				**Doc no: ASMF4.2.**			**Compiled by:**	**Sifiso Nyambi**		
	Effective date:		**04/2026**	**Rev: 01**	**Revision date:**		**04/2026**	**Authorized by:**	**N Msibi**		

OBJECTIVE: It is mandatory to identify and address risks to impartiality on an ongoing basis, as part of the general requirements of ISO 17025, ISO 17034 and ISO 17043 implementation.

The **purpose** of including the impartiality clause is not only to safeguard the validity of test results from the proficiency testing rounds and assignment of values for reference materials. The objective is to avoid conflicts of interest and ensure that the management structure, the use of resources, and the execution of processes are implemented and maintained in a way to avoid any compromising situations or actions.

	RISK ASSESSMENT TO IMPARTIAI				
	Prepared By: Top Management team (S. Nyambi, T. Maponya & N Msibi)	**Date compiled: 19.08.2025**			
Identified Risk	**Causes of the risk**	**Existing controls**	**Responsible person**	**What are the consequenc**	
1. Lack of feedback	Clients do not stick to the timelines outlined for the submission of results, ignore calls and emails and only submit results after closing date.	Setting communication reminders to ensure that clients send results on time.	N Msibi	Internal undue pressure in the ser insufficient time is reserved to thc assess and compile reports.	
				Give rise to inaccurate reports cor there is not enough time to thouro	
				We cannot meet the deadlines, th become affected.	

Commercial pressure
Management influence
Dual Roles
Financial dependants on a client
Methodological risks

LITY

	Template review date: 20/04/2026	Rev: 01	Doc number: ASRI 4.2-001	
ces	**Existing controls**		**Responsible person**	**Tasks to improve control effectiveness**
nse that proughly	Revise the instruction of the PT participation form to include the consquences of sending results after the closing date.		N Msibi	Set reminder on calender for the 20th to remind participants to send results by the 25th. Communicate through email and/or whatsapp
mpiled as ughly	There is an internal grace period for clients, from 25-27 of each month. This gives them an additional 2 days to submit their results.			
us KPI's				

Risk List (work down the columns, then across)

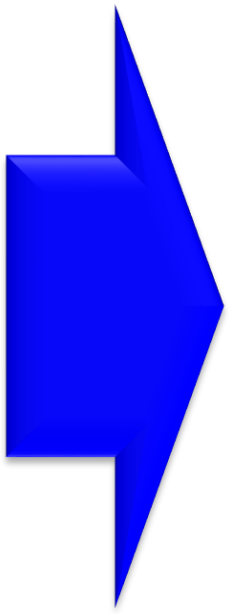

IDENTIFICATION RISK TO IMPARTIALITY

Nr	Risk	Category
1	Lack of training with regards to business conduct as PT scheme provider	Cause
2	remuneration	Cause
3	relationships(personal, famillial, business, supplier, gifts, etc)	Cause
4	job security	Cause
5	conflict of interest	Cause
6	limited participants	Cause
7	staff turnover	Cause
8	lack of feedback	Risk
9	Commercial pressure	Risk
10	Management influence	Risk
11	Dual Roles	Risk
12	Financial dependants on a client	Cause
13	Methodological risks	Risk

RISK CONTROL EFFECTIVENESS GUIDE

RCE		Guide
Fully effective	***F***	Nothing more to be done except review and monitor the existing controls. Controls are well designed for the risk, are largely preventative and address the root causes and Management believes that they are effective and reliable at all times. Reactive controls only support preventative controls.
Partially effective	***P***	Most controls are designed correctly and are in place and effective. Some more work to be done to improve operating effectiveness or Management has doubts about operational effectiveness and reliability.
Ineffective	***I***	While the design of controls may be largely correct in that they treat most of the root causes of the risk, they are not currently very effective. There may be an over-reliance on reactive controls. OR Some of the controls do not seem correctly designed in that they do not treat root causes, those that are correctly designed are operating effectively.
Totally ineffective	***Ti***	Significant control gaps. Either controls do not treat root causes or they do not operate at all effectively. Controls, if they exist are just reactive.
None	***N***	Virtually no credible control. Management has no confidence that any degree of control is being achieved due to poor control design and/or very limited operational effectiveness.
